

MotleyMoves

Modernizing Moves Training's approach
towards promoting healthy and safe group
exercise in the Central Valley

Our Path, Our Mission:

Expediting Modesto Move's transition from pen-and-paper record-keeping towards an intuitive, all-in-one mobile application. We aim to ensure participants are safe while providing useful functionalities to make planning and attending events as streamlined as possible.

Azure Cloud Platform

Leveraging Azure Cloud for Nonprofit's \$5,000/year in Azure Credits, we are able to track participants, events, and collect and visualize event telemetry.

Safety at Every Step

Embedding safety across all layers of the application, we ensure participants feel comfortable and protected during events, providing them many tools to aid in this.

Redesigned Workflow

Promoting ease-of-use, we have revamped Modesto Move's administrative workflow and user experience with a new custom-made UI with MapBox and jQuery.

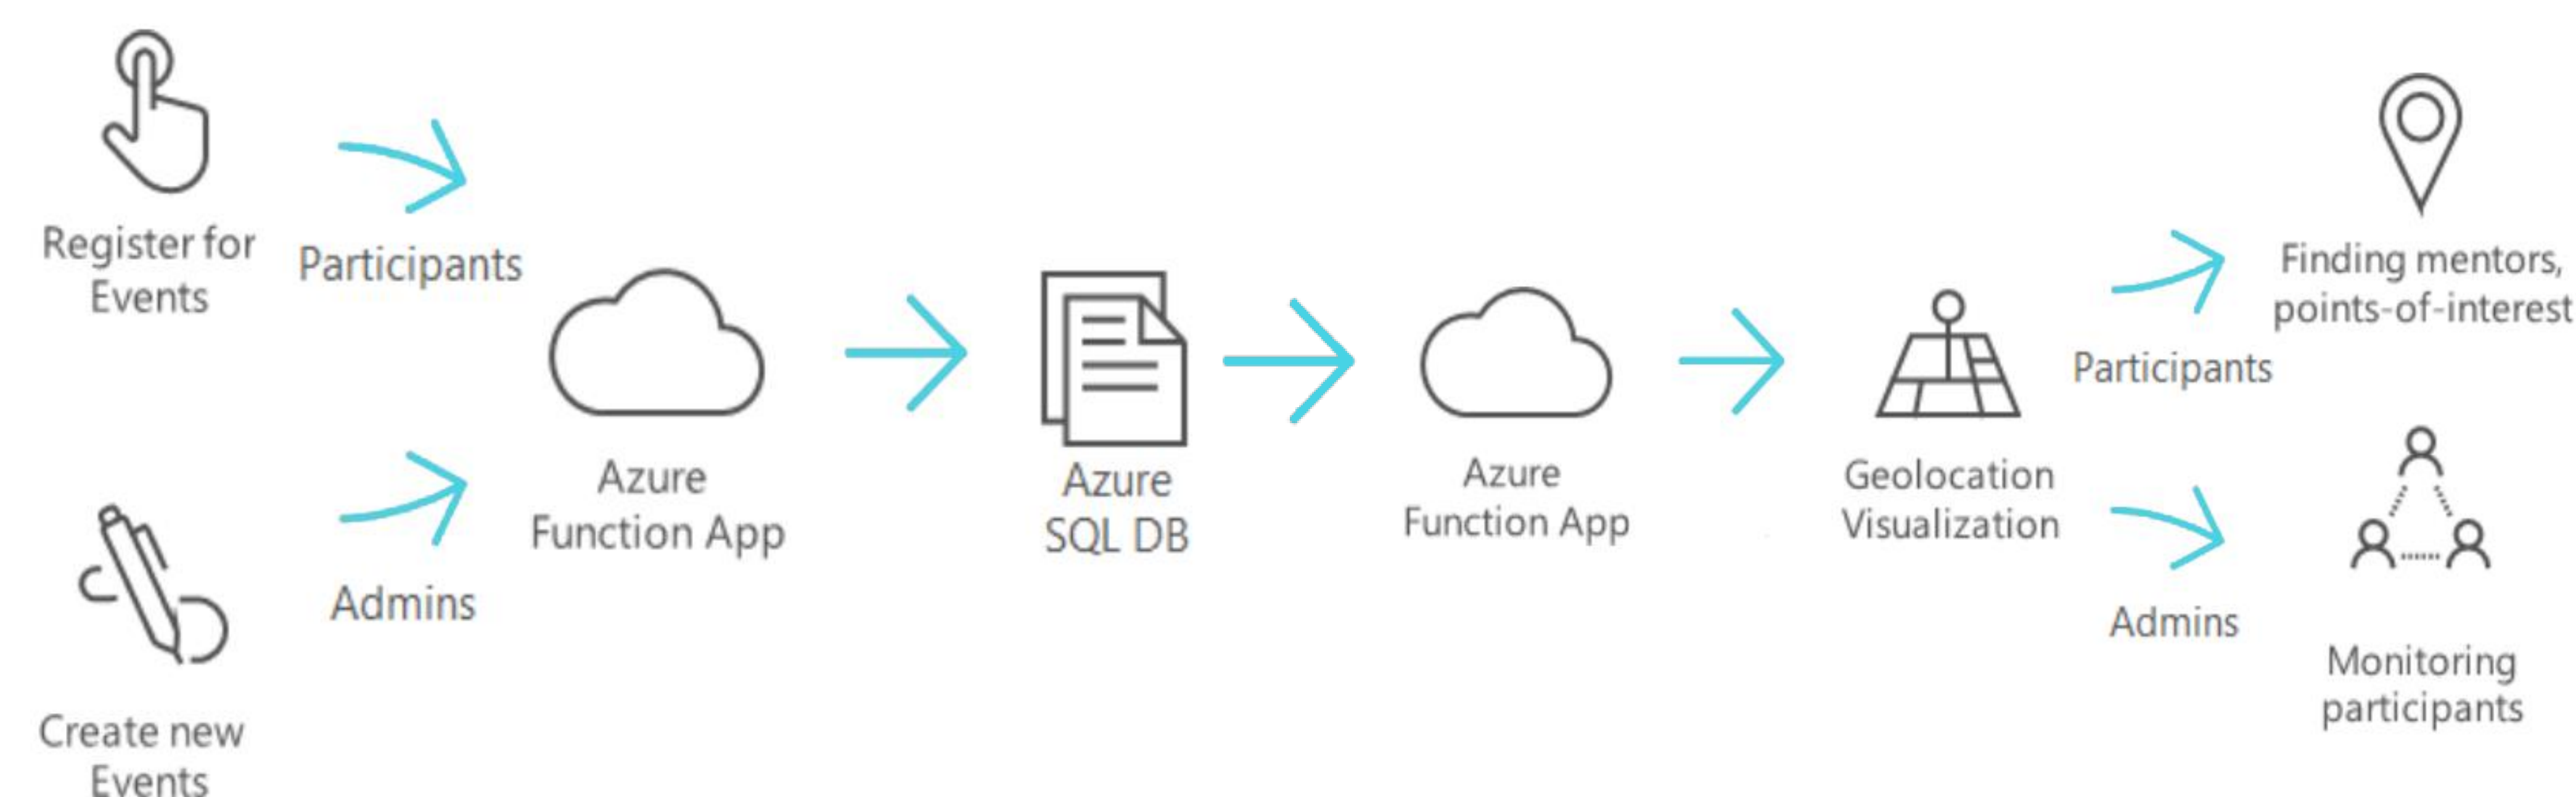

Attendance Tracking

Improving attendance tracking with digital technologies, we have added a fun incentive system to encourage participation and reward those who attend many events.

Let's Get Technical!

Technically speaking, MotleyMoves is a full-stack solution consisting of a serverless C#.NET Azure Function App to connect our Azure SQL Database to our HTML/CSS/JS web application, integrating Google Sign-In and MapBox APIs.
